ASSETWIN VERSION 6.0 RELEASED

NAPERVILLE, ILLINOIS, (March 28, 2005) – The latest version of AssetWIN, Version 6.0, was released today by Asset Systems, Inc. With this latest release, AssetWIN continues its evolution as the premier asset management tool for moveable fixed assets. The goal of this release is to strengthen the user interface and enhance AssetWIN's ability to integrate with fixed asset accounting systems.

“The asset management landscape continues to change and our products and services must constantly adapt to those evolving user requirements,” commented Alden Snyder, ASI's President. “Organizations are looking for innovative ways to use asset management data in other applications. Our Version 6.0 enhancements provide the basis of truly seamless integration.”

Other changes include a system alert feature to monitor system status and warn the user of any unexpected occurrence or required systems maintenance. The query capabilities have been extensively improved and broadened throughout the system allowing the user simplified query access.

As with all AssetWIN versions, 6.0 will support Access, SQL Server and Oracle databases. All Windows versions for the companion bar code application, DataCAP, are also supported.

Asset Systems, Inc., based in Naperville, IL, was formed in October, 1987. Its flagship product, AssetWIN, provides bar code based asset management solutions for clients throughout North America. For more information call (877) 955-4321 or log on to www.assetsystems.com.
