AssetWIN 2011 Release Targeted for January

Naperville, IL -- Asset Systems, Inc. has announced the release of AssetWIN 2011 effective January 1, 2011. AssetWIN, originally introduced in 1995, provides a highly adaptable environment for managing any type of moveable fixed asset. This release supports 64 bit processing and includes a wide range of ease of use improvements. For example, the user may now tailor the use of user defined data to require, show or hide any UDF within any data partition. This improvement further enhances the adaptability of the program to the user's specific needs.

User adaptability is a key feature of AssetWIN. Typically, users will tailor asset views, data elements and reports to various departmental requirements while maintaining a central control for financial reporting. By simply assigning a data category to assets, the application automatically organizes these tasks.

Another area of improvement is the field data collection process. “Because we use the product to conduct inventories for our clients, we are highly sensitive the operational efficiency of the product,” commented Alden Snyder, President. “We have streamlined and added several convenience features to the routines that verify data collected by mobile devices. These improvements cause no interruption to the comprehensive verification process upon which our users have come to rely.”

Existing clients may access this upgrade for no additional cost from the company’s web site, www.assetsystems.com or by using the “Check for Update” feature built into AssetWIN. Improvements have also been made to both batch and WIFI versions of DataCAP which is used for mobile data capture.

Asset Systems, Inc., based in Naperville, IL, was formed in October, 1987. Its flagship product, AssetWIN, provides bar code based asset management solutions for clients throughout North America. For more information call (877) 955-4321 or log on to www.assetsystems.com.
