## DataCAP 2011 Released

Naperville, IL -- Asset Systems, Inc. announced the immediate release of DataCAP 2011. Originally introduced in 1987, DataCAP has been expanded to capture both bar code and RFID based data in either batch or WIFI modes. This version operates on a Windows CE and Windows Mobile compatible devices.

“Often overlooked is the data collection element which is one of several necessary components of an asset tracking solution,” according to Alden Snyder, President of Asset Systems. “This version of DataCAP is faithful to our original design criteria: a single program for all types of transactions and inventory methods. That’s easier for the user and takes many steps and opportunities for errors out of the process.”

This version of DataCAP has been totally redesigned and brings both the WIFI and batch programs the identical look and feel.

All inventory methods – individual identification, grouped and audit – are provided within a single program. The batch version features a unique RFID audit capability for users of this advanced technology. This software is compatible with all version of AssetWIN 2007 or more recent.

All new scanning equipment sold after December 1, 2010 will include this version of DataCAP. Existing customers may send units to ASI for free upgrades before March 31, 2011. Significant improvements have also been made AssetWIN 2011 and are also provided at no additional cost to users covered by support agreements.

Asset Systems, Inc., based in Naperville, IL, was formed in October, 1987. Its flagship product, AssetWIN, provides bar code based asset management solutions for clients throughout North America.
